Tri Wahyu Guntara

Applied Research Engineer (RL), KRAFTON

wahyu.guntara@gmail.com | gunnxx.github.io | linkedin.com/in/wahyuguntara

Research interests. Making reinforcement learning work outside benchmark conditions, from agents shipped in games to sim2real transfer on physical robots.

Experience. State, action, and reward design for game environments; sim2real and vision-language-action (VLA) models for robot control; information-theoretic representation learning; multi-agent policy optimization.

EDUCATION

M.S. in Artificial Intelligence Sep 2021 – Aug 2024

Korea Advanced Institute of Science and Technology (KAIST) *South Korea*

- Advisor: Prof. Kee-Eung Kim
- Thesis: *Information-Theoretic Distraction-Free Representation Learning for Visual Offline RL*

B.Eng. in Electrical Engineering Sep 2016 – Aug 2020

Universitas Indonesia *Indonesia*

EXPERIENCE

Research Engineer Jul 2026 – Present

Ludo Robotics *Seoul, South Korea*

- Concurrent position, dispatched from KRAFTON to Ludo Robotics, a robotics spin-off of the company.
- Vision-language-action (VLA) policies and systems integration for the real-robot deployment of Ludi 0.1, an agentic system for socially intelligent robots.

Applied Research Engineer (RL) Nov 2024 – Present

KRAFTON Inc. *Seoul, South Korea*

> **Physical AI Team** · Dec 2025 – Present
>
> - RL for sim2real and vision-language-action (VLA) models.
>
> **Reinforcement Learning Team** · Nov 2024 – Nov 2025
>
> - RL agents for PUBG and PUBG: Blindspot.

Graduate Student Research Assistant Jan 2022 – Aug 2024

Korea Advanced Institute of Science and Technology (KAIST) *South Korea*

> **Artificial Intelligence & Probabilistic Reasoning Lab** · Jan 2023 – Aug 2024
>
> - Reinforcement learning and thesis project under the advisory of Prof. Kee-Eung Kim.
>
> **Autonomous Vehicles and Embedded Systems Lab** · Jan 2022 – Dec 2022
>
> - Self-driving car and reinforcement learning under the advisory of Prof. Seung-Hyun Kong.

Research Scientist Intern Jun 2019 – Dec 2019

Kata.ai *Indonesia*

- Benchmarked models on Indonesian sequence labeling tasks (POS tagging, NER, SRL).
- Collected scattered Indonesian-English data and benchmarked models on neural machine translation.

PROJECTS

Ludi 0.1: An Agentic System for Socially Intelligent Robots 2026
A robot that holds a spoken conversation while it perceives, navigates, and manipulates, driven by a fine-tuned vision-language model that reasons over context and calls the navigation and manipulation policies as tools. Contributed the vision-language-action (VLA) policies and the systems integration behind deploying it on the real robot.

CLEAR: Controllable Latent State Extractor for Visual Offline RL 2024
Master's thesis project on learning agent-centric latent representations that remain robust when the visual observation is full of distractions.
↗ project page ↗ paper ↗ code

PALAPA-707: An Autonomous VTOL Drone for the Indonesia Flying Robot Contest 2018 2018
Undergraduate team project at Universitas Indonesia: an autonomous drone for payload pick-up and delivery, built around a PID controller with vision-based target detection.

SCHOLARSHIPS & AWARDS

Hyundai Motor Chung Mong-Koo Global Scholarship Sep 2021 – Aug 2023
Full scholarship for the duration of the two-year master's study at KAIST.

Indonesia Flying Robot Contest 2018, Honorable Mention Nov 2018
Vertical take-off and landing (VTOL) category.
